**CLIMATE CONTROL**

Your home can be made cooler in the Summer and warmer in the Winter by planting trees and shrubs in the proper places. Trees which will shade your roof and house walls from Summer heat will reduce your house temperature by 10%.

In the Winter they will shield you from Winter winds and reduce your fuel bills.

The evaporation of large quantities of water through the foliage produces a radiant cooling effect. Trees and shrubs are nature's air conditioners.

## "PLANT IT YOURSELF" and Save Money

Additional pride and satisfaction are gained when you do your own planting and gardening. If your plans are not too ambitious, planting can be a pleasure and a source of relaxation.

Planting requires no special skill and our SIX MONTHS GUARANTEE is the same regardless of who plants.

The rising cost of labor has caused a definite trend to "DO IT YOURSELF." The following sketches demonstrate how easy it is.

### HOW TO PLANT

Proper planting, pruning and watering are essential to the success of nursery stock. The ground should be plowed or spaded deeply. Holes should be large enough so the roots can be spread out without crowding. Soil should be packed firmly around roots so there are no air spaces and so roots are in tight contact with the soil. After planting, water thoroughly with hose twice a week until established.

### SPRAYING SERVICE

HEALTHY EVERGREENS are assured when sprayed at the proper time. During the late Winter, dormant spraying may be safely done up to March 15th.

In June and July Evergreen spraying may again be necessary to combat Summer infestations. Our men and equipment are available at these times to render service. Please phone for rates. We are not equipped to spray fruit trees.

### TRIMMING SERVICE

Many of the evergreens benefit by an annual shearing. This is especially true of the Taxus, Thuja, Juniper and Hemlock. A good time to do this is late June, July and August. It is much better to trim evergreens moderately each summer. This will make them bushy and compact, and less susceptible to damage during sleet and snow storms. Our men will be available for this service during the summer or winter months. Please phone for rates.

Our prices will compare favorably and are not to be confused with smaller sized bulbs. If you want to enjoy the Spring Glory of Holland Bulbs, you must plant this Fall.

**TRIMMING SERVICE**

Many of the evergreens, especially Taxus, Thuja, Juniper and Hemlock, benefit by an annual shearing in late June, July or August. Moderate trimming each Summer makes for a bushy, compact plant that is less susceptible to sleet and snow damage.

Our men will be available for this service during the Summer or Winter months. Please phone for rates.

**SPRAYING SERVICE**

HEALTHY EVERGREENS are assured when sprayed at the proper time. During late Winter, dormant spraying may be safely done up to March 15th.

## PERENNIAL FLOWER SEEDS

R — Indicates Suitable for Rock Gardens

Aside from the matter of economy, there is a great fascination and satisfaction in raising one's own perennial plants.

Perennial seeds may be planted any time from May to July but we recommend sowing fairly early as seed germinates better in cool weather than in the heat of midsummer. The seedlings thus have an opportunity to develop into strong little plants which winter over more successfully.

LAWN GRASS SEED  
Buying Lawn Grass Seed

Any good mixture of grasses suitable for making a lawn and developing a smooth texture, permanent turf must contain a large percentage of perennial grasses. These are the only grasses that are of permanent growth, remaining year after year, plants increasing in size and vigor and developing into a strong solid turf. These grasses are naturally of slower growth and more costly than those providing quick coverage but less durability.

It is a commonly recognized and admitted fact that the cheaper grass seed mixtures will show quicker and more uniform germination, developing a faster green coverage but in the end do not make a lawn of the desired appearance or permanency.

These cheaper mixtures, while they may have a place and serve a purpose, can not, because of price, contain a sufficient percentage of the best perennial grasses and the ultimate results from them are usually a disappointment.

After all the work of grading and preparing of the ground for a proper lawn you should use only a good grade and durable seed mixture from a reliable source of supply.

The following quantities will be practical on most lawn mixtures. For new lawns, use 1 lb. to 250 sq. ft., 4 lbs. to 1000 sq. ft. For replenishing old lawns we recommend about one-third to one-half this quantity of seed.

ANCO LAWN SEED

"ANCO" (Adams Nursery Co.) is a name we are proud of and is a mixture especially adapted to this area. This serviceable lawn grass is less expensive and produces a good lawn. All lawns at Adams Nursery were produced from this brand.

The analysis is as follows: 30% Kentucky Blue Grass, 27% Chewings Fescue, 25% Red Top, 15% Rye Grass, 3% White Clover.

### SPRAYING SERVICE

HEALTHY EVERGREENS are assured when sprayed at the proper time. During the late Winter, dormant spraying may be safely done up to March 15th.

In June and July Evergreen spraying may again be necessary to combat Summer infestations. Our men and equipment are available at these times to render service. Please phone for rates. We are not equipped to spray fruit trees.

### TRIMMING SERVICE

Many of the evergreens benefit by an annual shearing. This is especially true of the Taxus, Thuja, Juniper and Hemlock. A good time to do this is late June, July and August. It is much better to trim evergreens moderately each summer. This will make them bushy and compact, and less susceptible to damage during sleet and snow storms.

Our men will be available for this service during the summer or winter months. Please phone for rates.
